UPDATE for DENVER DVBC-120 (to improve signal sensitivity & correct EPG issue)

We have an update ready that makes the box less sensitive regarding signal. (you still need proper cables and assembling of the cable to avoid disturbances though).

It will also add standby loop through + add a keyboard for renaming recordings.

To update, download the file, and copy it to an empty USB stick. Then enter setup/menu and go to system. Find "usb update" and choose the file. Wait for it to update you may not turn off the box while it is updating as this will damage it. Update can be found here:
